Time synchronization in local networks.

18 CUPS

Why is it so much easier now to set up printers in Linux? Much of the thanks should go to the Common Unix Printing System (CUPS), a universal printing system for Unix and Linux. Samba, and CUPS can work together to make your CUPS print servers available to both Windows and Linux-based clients. We'll take you on a tour of the CUPS printing system and show you how to configure your Windows clients to get the most from CUPS.

38 Suse Linux OpenExchange 4.1

Suse Linux OpenExchange 4.1 is the first OpenExchange release since Novell acquired Suse. And you can tell the OpenExchange team is more determined than ever to win converts from their glowering groupware rival Microsoft Exchange. You'll learn more about the new features of version 4.1, including file sharing extensions to HTTP and new connectivity with Personal Information Management (PIM) tools.

50 GnuCash

Looking for a good, practical program for managing your finances? GnuCash will help balance your checkbook and will even assist you with online banking. And you don't have to put it on your system. (In other words, it's free.) This article shows how to set up and use the GnuCash program. You will also learn about other Linux-compatible financial tools, such as the tools Moneydance and KMyMoney.

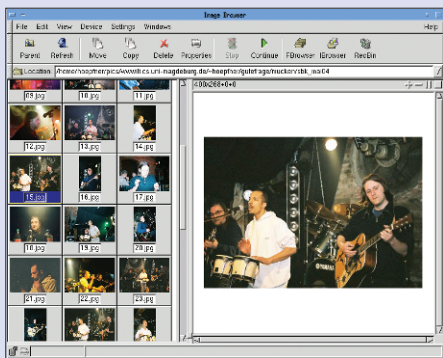

62 PHP Security

PHP is safer than ordinary CGI, but it isn't safe enough unless you take some precautions. In this article, you'll learn about some important options for improving security on PHP-based websites. We'll show you how to look for holes in your PHP scripts. The article also looks at what to do to avoid those holes through good coding practice. And you'll find out why Safe_mode might not live up to its promising name.

78 Endeavour

If you're looking for a fast, friendly, and full-featured file manager, try Endeavour Mark II. Endeavour provides most of the file management options of Konqueror and Nautilus,

with a smaller footprint and, according to many users, better performance. Learn more about the Endeavour file manager and how to use it to manage your files.

87 KDE "aKademy"

The annual KDE team conference has once again kept pace with the KDE desktop, and they both just keep on going. This summer, the international KDE community met down in Ludwigsburg near Stuttgart, and it was all one big giant coding session on the top floor of the film academy complex. In addition to the coding were tutorials, a developer conference on the first weekend, and a user conference on the second. Learn more about aKademy and the world of KDE in our eye witness exclusive report.

SYSADMIN

Charly's column 57
Real system admin tips and tricks to help you.

Admin Workshop: Process List 58
Touring the processes on a Linux workstation.

PHP Security 62

PROGRAMMING

Mozilla XUL: Web Menus 68
Web menus with XUL and XBL.

Perl: Office Office Access 72
Creating OpenOffice documents with Perl.

LINUX USER

KTools: KXML 76
Creating XML files with KDE's KXML Editor.

Endeavour Mark II 78
Managing and archiving files with Endeavour.

DeskTOPIa: wmdrawer 82

Command Line: Job Control 84
Job control in the shell.
